16. ABSTRACT

This report provides data on the use of sanitary landfills (Subtitle D facilities) for hazardous waste disposal in Florida by small quantity generators. It consists of eleven parts including a part called Study Area Data which contains the data aggregated across the counties covered in the report, and ten parts containing data at the individual county level for all 67 counties in Florida. Each county is described in terms of location, economic profile, and demographic characteristics. In addition, information is provided on permitted sanitary landfills that are currently active in Florida. This report contains survey data from approximately 19,000 hazardous waste generators that reside in 514 industries identified by four-digit Standard Industrial Classifications codes. The hazardous waste data are cross-tabulated and displayed in the following seven configurations: types of waste generated (26 types); management methods used (14 methods); types of wastes disposed in sanitary landfills; SIC generating waste; types of waste generated by SIC; management methods used by SIC; and waste types by SIC by management method. The last cross-tabulation consists of 14 sub cross-tabulations, i.e., one for each management method. There are identical sets of crosscounty data (i.e., each county has a set of 7 cross-tabulated tables.)

The information in this document has been funded wholly or in part by the U.S. Environmental Protection Agency under Grant No. CR-813151010 to the Florida State University. It has been subject to the Agency's peer and administrative review and it has been approved for publication as an EPA document. Mention of trade names or commercial products does not constitute endorsement or recommendation for use.

FOREWORD

This research was conducted in order to provide information to the U.S. Environmental Protection Agency that relates to the use of RCRA Subtitle D facilities by small quantity generators of hazardous waste. One area of concern that relates to RCRA Subtitle D facilities is the effectiveness of monitoring programs at these facilities. An important component in assessing monitoring programs at RCRA Subtitle D facilities is the data on the composition of wastes managed at these facilities. The purpose of this report is to provide to the EPA data on small quantity generator hazardous waste that is managed at RCRA Subtitle D facilities in the State of Florida, with a particular emphasis on sanitary landfills.

This report consists of eleven parts. Parts I-X of the report are called County Data and contain individual county data for those counties included in each of the first ten parts of the report. Part XI of the report is called Study Area Data and it contains data aggregated across all of the 67 counties in the State of Florida. Each county is described in terms of location, economic profile, and demographic characteristics. The specific counties that are included in Parts I-X of the report are the following:

Part I: Alachua, Baker, Bay, Bradford, Brevard

Part II: Broward, Calhoun, Charlotte, Citrus, Clay, Collier

Part III: Columbia, Dade, De Soto, Dixie, Duval

Part IV: Escambia, Flagler, Franklin, Gadsden, Gilchrist, Glades, Gulf, Hamilton, Hardee, Hendry, Hernando, Highlands

Part V: Hillsborough, Holmes, Indian River, Jackson, Jefferson, Lafayette

Part VI: Lake, Lee, Leon, Levy, Liberty, Madison, Manatee, Marion

Part VII: Martin, Monroe, Nassau, Okaloosa, Okeechobee, Orange

Part VIII: Osceola, Palm Beach, Pasco, Pinellas

Part IX: Polk, Putnam, St. Johns, St. Lucie, Santa Rosa, Sarasota, Seminole

Part X: Sumter, Suwanee, Taylor, Union, Volusia, Wakulla, Walton, Washington

ABSTRACT

This report contains data from all of the 67 counties in the State of Florida, and from over 19,000 small quantity hazardous waste generators. Most of the firms and agencies providing hazardous waste data included in this report are small quantity hazardous waste generators as defined in the RCRA regulations. These data are displayed according to 26 waste types, 14 waste management methods and 514 industries as defined by four-digit Standard Industrial Classification codes. This report contains individual county data for each of the 67 counties in the State of Florida summarized and presented by these waste types, waste management methods, and Standard Industrial Classification codes. This report also contains statewide data aggregated across all of the 67 counties in the State of Florida by these waste types, waste management methods, and Standard Industrial Classification codes.

These data indicate that there are approximately 129,000 tons of small quantity generator hazardous waste produced annually in the State of Florida. Approximately 35 percent of these wastes are recycled, while approximately 23 percent of these wastes are disposed in sanitary landfills in the State of Florida.

In terms of weight, the major types of waste disposed in sanitary landfills are "Waste Oils, Lubricants" (45 percent), "Lead-Acid Batteries" (12 percent), "Spent Solvents" (11 percent), and "Sludges with Heavy Metals" (5 percent). Even though waste oils are not regulated as a hazardous waste under the RCRA, they were included in the county-level surveys conducted in the State of Florida.

Counties in the State of Florida are relatively diverse in terms of geography, population size and growth, and economic activities. As such, these Florida data on small quantity generator hazardous waste are generally representative of the types and quantities of these wastes produced, and the management practices used, nationwide by small quantity hazardous waste generators.

SECTION 1

INTRODUCTION

The 1984 Hazardous and Solid Waste Amendments to RCRA require the U.S. Environmental Protection Agency (EPA) to complete a study of the adequacy of the current Subtitle D programs in the States and to report to Congress within 36 months of enactment of the amendments. The study is to evaluate the current criteria regarding protection of public health and the environment from problems associated with groundwater contamination. The study is to include a detailed assessment of the adequacy of groundwater monitoring programs at Subtitle D facilities, as well as a recommendation to Congress concerning what enforcement authorities are needed to properly implement the program.

After completion of this study, the EPA is to revise, where necessary, the criteria for facilities that receive household and small quantity generator hazardous waste. The revisions are to include all steps necessary to protect human health and the environment. The amendments specify that, at a minimum, the revisions should require groundwater monitoring as necessary to detect contamination. Information on the types and quantities of hazardous waste typically entering the Subtitle D facilities is important in order to properly design monitoring systems to detect contamination. The 1984 RCRA amendments require the states to adopt and implement Subtitle D permitting programs that are to be approved by the EPA, or that are equivalent or similar to the federal program as defined by current or revised criteria.

An important component in assessing groundwater monitoring programs at Subtitle D facilities is the acquisition of data on the composition of wastes managed at these facilities. The purpose of this report is to provide the EPA with data on potentially hazardous waste generated and managed in the State of Florida, as well as with information on sanitary landfills in Florida. The sanitary landfills described in the study are those that reside in the counties that have provided the hazardous waste generation and management data.

This report consists of eleven parts. Parts I-X of the report are called County Data and contain individual county data for all 67 counties in the State of Florida and, as a result, cover the hazardous waste management activities of small quantity generators for the entire State of Florida. Part XI of the report is called Study Area Data and it contains data aggregated across all of the 67 counties in the State of Florida. Each county is described in terms of location, economic profile, and demographic characteristics. The counties are listed in alphabetical sequence within each of the first ten parts of the report. The specific counties that are included in each part of the county data (Parts I-X) are specified in the Foreword (p. iii).

SECTION 2

METHODOLOGY AND STUDY AREA

METHODOLOGY

The data contained in this report on hazardous waste generation and management, and sanitary landfills were acquired from the Florida Department of Environmental Regulation (FDER). The hazardous waste data were collected as part of a statewide local government hazardous waste assessment program administered by the FDER. These data have been compiled to assist the EPA in evaluating facilities (sanitary landfills) regulated under Subtitle D of the RCRA so that appropriate groundwater monitoring programs can be established at these facilities. The data contained in this report will assist the EPA in defining the problems associated with hazardous waste disposal in sanitary landfills and with other management methods used by small quantity generators of hazardous waste. In addition, these data can provide information that the agency can use in determining the regulatory status of waste oil in the context of the RCRA concerns.

The data are presented in tabular form by amount, type, waste management method, and Standard Industrial Classification (SIC) code. Waste amounts are in units of pounds for the county data (Parts I-X) and in units of tons for the study area aggregated data (Part XI). There are (26) waste types and (14) waste management methods into which the data are arranged. In addition, there are 514 four-digit Standard Industrial Classification codes into which the data have been cross-tabulated and arranged.

It should be noted that an initial list of approximately 400 SIC codes was prepared by the FDER, and this list was used by the counties in identifying potential generators of hazardous waste. The number of SIC codes for which data are presented in this report reflects the SIC codes actually reported by the potential generators responding to the survey. Some survey respondents, for example, changed the SIC code on the survey form sent to them, to an SIC code that more closely reflected the primary activity of the firm as judged by the respondent. The changing of SIC codes by survey respondents resulted in SIC codes that are not on the initial FDER list, but are, nevertheless, contained in this report. As a result, the total number of SIC codes for which data are presented in this report is 514.

The county level data were provided by the FDER and merged into a single data file for computer manipulation. Due to the decentralized way that the data were collected, keypunched, and coded, some deficiencies exist in the data and should be noted. First, Bay, Broward, Dade, Escambia, Monroe, Okaloosa, Santa Rosa, and Walton counties utilized a waste management category called "Picked Up by a Private Hauler." When these data were processed by the counties, they were coded into the category "City, County, or Private Hauler Takes Waste to the Landfill." Although unknown, it may be that some of these wastes were recycled or managed in ways other than disposal in sanitary landfills. A significant amount of these wastes are waste oils, lead-acid batteries, spent solvents, and empty pesticide containers. This coding procedure over-estimates the amount of waste managed at sanitary landfills in these counties.

Second, De Soto, Hardee, Highlands, Okeechobee, and Polk counties also utilized a waste management category on their survey form called "Picked Up by a Private Hauler." However, in this case, these counties did not specify where this material was taken for ultimate management, whereas, in the previous case, it was assumed that all waste that was reported picked up by a private hauler was, in turn, taken to a sanitary landfill. Wastes reported managed in this category for these counties have been consolidated into the waste management category "Other" in this report. Much of the wastes reported managed by this method are wastes that typically have secondary market value (e.g., waste oils, lead-acid batteries, spent solvents, and empty pesticide containers). It is likely that some of these waste were ultimately recycled. It is not possible to determine the ultimate management fate of wastes reported in this category on the survey forms. The use of the category "Picked Up by a Private Hauler" under-estimates the amounts and types of waste managed at sanitary landfills for these counties.

Upon examining the data in terms of the waste types generated by Standard Industrial Classification (SIC) codes, some anomalies have been identified. These anomalies relate to the reported generation of, for example, dry cleaning filters, waste explosives, and photographic wastes by industries that typically would not generate these types of wastes (e.g., Plumbing, Heating and Electrical Establishments, Gasoline Service Stations, Boat Building and Repair Shops, Trucking Companies, General Automotive Repair Shops, Reupholstery and Furniture Repair Shops, Motor Vehicle Dealers and Automobile and Home Supply Stores). The presence of these anomalies in the data does not significantly affect the overall distributions of waste types generated or waste management methods reported used by generators participating in the assessments. As with any large, decentralized data base, it is anticipated that errors relating to respondent accuracy, coding and keypunching have occurred.

The data relating to sanitary landfills in the study area were obtained from the FDER. The FDER maintains a data file on all sanitary landfills in the State of Florida. The data in the FDER file are for all classes of landfills, and for landfills that are closed, inactive, or active. The data presented in this report are only for landfills that are in use (i.e., permit status: active) and of Class I, II, or III.

Sanitary landfill facility classes are defined by the FDER as follows:

Class I Landfill	Landfill receiving some putrescible waste or garbage with total disposal in excess of 20 tons or 50 cubic yards (compacted) per day. Daily cover is required.
Class II Landfill	Landfill receiving some putrescible waste or garbage with total disposal of less than 20 tons or 50 cubic yards per day. Minimum cover is once every four days.

Class III Landfill	Landfill receiving only non-putrescible waste (i.e., trash, demolition and construction debris, yard trash, etc.). Minimum cover requirement is once per week.

The data file maintained by the FDER consists primarily of information contained in the facility permit, as well as a historical log of permit activities, including operational deficiencies at the facility. Printouts of each of the 160 active sanitary landfills that are in the 67 counties in the State of Florida are contained in Appendix D of Part XI of the report (Study Area Data), and definitions of the facility profile codes used in the FDER printouts are contained in Appendix E of Part XI of the report (Study Area Data).

In the appendices of Parts I-X of the report (County Data), there are displays that contain 21 summary characteristics for each active sanitary landfill in the State of Florida. These summary characteristics have been extracted from the facility printouts contained in Appendix D of the Study Area Data.

STUDY AREA

The study area for this report is the entire State of Florida including all 67 counties and is shown in Figure 1. Florida counties are diverse in terms of population, location, and economic profile. These counties consist of: highly populated, urban areas; areas with relatively low population or rural areas; coastal and non-coastal areas; relatively industrialized areas with varied manufacturing activities; and, areas that are relatively non-industrialized. In the appendices of Parts I-X of the report (County Data), each county is briefly described in terms of location, population, and economic activities occurring in the county.

SECTION 3

HAZARDOUS WASTE GENERATOR DATA AND CHARACTERISTICS OF SANITARY LANDFILLS

HAZARDOUS WASTE GENERATOR DATA

The hazardous waste generator data for the counties included in this part of the report are presented in the Appendices of this part. These data provide information on the hazardous waste generation and management practices of smaller hazardous waste generators in these counties, particularly as they relate to the use of sanitary landfills for disposal of these wastes.

The county hazardous waste data included in this report are presented in the following displays:

- Types and Amounts of Hazardous Waste Generated Annually;
- Hazardous Waste Management Practices;
- Hazardous Waste Disposed in Sanitary Landfills Annually;
- Hazardous Waste Generated by Standard Industrial Classification Code;
- Hazardous Waste Types Generated by Standard Industrial Classification Code;
- Hazardous Waste Management Methods Used by Standard Industrial Classification Code; and
- Hazardous Waste Types Generated by Standard Industrial Classification Code by Management Method.

All hazardous waste data included in the report were collected as survey data under the Florida Local Government Hazardous Waste Assessment Program. A major goal of the Florida Local Government Hazardous Waste Assessment Program is to address the problems associated with hazardous waste mismanagement, particularly as this mismanagement relates to smaller quantity generators. This program requires all counties in the State of Florida to conduct assessments of hazardous waste related activities in their jurisdictions using guidelines developed by the Florida Department of Environmental Regulation (FDER). One component of the county assessments consists of a survey of hazardous waste generators. Generators in each county were identified using a list of approximately 400 Standard Industrial Classification (SIC) codes. This SIC list was assembled initially by the EPA Office of Solid Waste for use in its national survey of small quantity generators. The EPA list was subsequently expanded to include firms that are of particular significance to the State of Florida (e.g., Boat Building and Repair), as well as to include those firms that are involved with the production or use of waste oil. Although waste oils are not regulated as a hazardous waste under the RCRA, waste oils were included in the State of Florida surveys.

The survey data were collected utilizing questionnaires sent through the mail and on-site interviews. All county data were intended to be made available to the FDER in a predetermined format so that the data could be merged into regional assessments, as well as a statewide assessment of hazardous waste generation and management practices.

All counties in the State of Florida received funding from the state to complete the surveys. The funding received by the counties was based upon population. The surveys were conducted under a variety of agreements involving county governments, regional planning agencies, private consultants, and combinations of these entities. For example, some counties conducted their own surveys while utilizing a consultant to process the data, while some of the larger counties completed all aspects of the survey in-house. The result was the collection of data through a number of individual but coordinated efforts.

The waste generation and management data consist primarily of responses from small quantity hazardous waste generators. However, some of the county data are not separated by large quantity generator data and by small quantity generator data. Overall, the portion of large quantity generator waste in these data is not significant.

CHARACTERISTICS OF SANITARY LANDFILLS IN THE STATE OF FLORIDA

This report contains information on sanitary landfills that are receiving potentially hazardous wastes. The characteristics of these sanitary landfills were obtained from the FDER. These data have been extracted from the facility permits and are maintained by the FDER in a facility data file (data file: GMS 25). Individual facility printouts for all active sanitary landfills in the State of Florida are contained in Appendix D of this part of the report (Part XI). Corresponding landfill characteristics for the 160 individual active sanitary landfills in the State of Florida are contained within the appendices of Parts I-X (County Data) of the report. The sanitary landfill information is summarized and displayed in tabular form, and is constructed from a list of twenty-one characteristics. These sanitary landfill characteristics are:

- Class of Landfill
- Responsible Authority
- Design Capacity
- Population Served
- Disposal Method
- Waste Types Accepted
- Land Owner
- Disposal Acreage
- Waste per Day Accepted
- Total Acreage
- Landfill Type
- Years in Operation
- Gas Control Used
- Cell Depth
- Depth to Water Table
- Soil Permeability
- Liner Material
- Number of Monitoring Wells
- Approved GW Monitoring Plan
- Adjacent Land Use
- Number of Surface Monitoring Points

APPENDIX A:

Alachua County

ALACHUA COUNTY

Alachua County, shown in the following figure, is located in the northcentral portion of the state, and is bordered by eight Florida counties. Alachua County is approximately 967 square miles in area. It is predominantly a rural county with some metropolitan areas. In 1970, the population of Alachua County was 104,800 and in 1983 the population was 162,400. In 1990 the population of Alachua County is projected to increase to approximately 185,000. The main metropolitan area in Alachua County is the city of Gainesville. The city of Gainesville is supported primarily by the University of Florida, one of the major educational and research facilities in Florida.

The largest employment sector in Alachua County is Services, contributing about 53 percent of all jobs in the county, while Retail Trade contributes about 19 percent of all jobs in the county. The Construction and Manufacturing sectors each contribute about 6 percent of total employment in the county. The Government sector represents 5 percent of total employment. The remaining jobs are contributed by all other sectors, including Agriculture, Mining, Wholesale Trade, and Finance, Insurance, and Real Estate.

There are two active landfills in Alachua County, which are the Southwest Alachua Sanitary Landfill (Class I) and the General Electric Battery Chemical Landfill (Class II). The Southwest Alachua Sanitary Landfill is seventeen years old and has approximately one remaining year of operating capacity. This Class I facility has three groundwater monitoring wells, no liner, and a depth to the water table of 45-50 feet. The General Electric Battery Chemical Landfill is a privately-owned facility that is less than ten acres in size. This facility has four groundwater monitoring wells, and consists of a trench-type landfill with an associated holding pond and oxidation pond.

APPENDIX B:

Baker County

BAKER COUNTY

Baker County, shown in the following figure, is located in northeastern Florida along the Florida-Georgia border. Baker County is comprised of 588 square miles, and contains the St. Mary's River and numerous small streams that are used for recreational fishing. It is primarily an agricultural county with few urban areas. In addition to agriculture, forestry also contributes significantly to the economy of Baker County. Approximately 70% of the population resides in the unincorporated portion of the county. The 1970 population in Baker County was 9,215, while the 1980 population was 15,289. In 1983, the population of Baker County was 16,525, and it is estimated to rise to 24,300 by 1990.

The largest employment sector in Baker County is Services, contributing about 52 percent of all jobs, while Government and Retail Trade each contributed about 10 percent of all jobs in the county. Manufacturing contributes about 5 percent of total employment in the county. The remaining jobs are contributed by all other sectors of the economy in Baker County.

There is one active landfill in Baker County called Central Baker Landfill (Class I). The facility utilizes a trench method of disposal. The facility is not lined and it does not have an FDER-approved groundwater monitoring plan. The FDER inspection reports indicate instances of noncompliance with permit requirements.

APPENDIX C:

Bay County

BAY COUNTY

Bay County, shown in the following figure, is located in the northwestern portion of the state along the coast of the Gulf of Mexico and is approximately 758 square miles in area. It is predominantly a rural county with some metropolitan areas. In 1970, the population of Bay County was 75,300 and in 1983 the population was 107,663. In 1990 the population of Bay County is projected to increase to 127,000. The main metropolitan area in Bay County is Panama City, which had a 1983 population of 34,200 residents. Panama City is a coastal city and is supported primarily by tourism-related businesses.

The largest employment sector in Bay County is Services, contributing about 32 percent of all jobs in the county, while Retail Trade contributes about 25 percent of all jobs in the county. The Government and Manufacturing sectors each contribute about 10 percent of total employment in the county. The Construction and Transportation, Communication, and Public Utilities sectors represent 8 percent and 6 percent respectively of total employment. The remaining jobs are contributed by all other sectors, including Agriculture, Mining, Wholesale Trade, and Finance, Insurance, and Real Estate.

There is one active landfill in Bay County, Majette Tower South, a Class I facility which is an old borrow pit. Majette Tower North has recently been closed due to documented problems. A study by the Northwest Florida Water Management District revealed that of the ten monitoring wells reported to be in place at Majette Tower South only six were found. Of these six, only three were considered adequate.

APPENDIX D:

Bradford County

BRADFORD COUNTY

Bradford County, shown in the following figure, is located in the northeastern portion of the state. Bradford County is approximately 305 square miles in area. Bradford County is predominantly a rural area with various agricultural activities occurring in the county, including: truck farming; tobacco farming; timber production; and livestock production. In 1970, the population of Bradford County was 14,600 and in 1983 the population was 22,800. In 1990 the population of Bradford County is projected to increase to approximately 30,000. The main metropolitan area in Bradford County is the city of Starke.

Employment in Bradford County is relatively evenly distributed across three main sectors: Services, Government, and Retail Trade (i.e., approximately 25 percent from each sector), with the other sectors contributing the remaining jobs in Bradford County. Manufacturing is reported to contribute about 12 percent of all jobs in Bradford County, however these jobs are associated with timber production.

There is one active sanitary landfill in Bradford County, the Santa Fe Landfill. The Santa Fe Landfill began operation in 1975, and has approximately three remaining years of operating capacity at this forty acre facility. The site has a clay liner, four groundwater monitoring wells, an average cell depth (i.e., waste cell) of about 20 feet, and a depth to the water table of about 25 feet. Run-off and drainage at the site is discharged to the Santa Fe Swamp.

APPENDIX E:

Brevard County

BREVARD COUNTY

Brevard County, shown in the following figure, is located near the center of the Florida east coast. The focal point of the county is the John F. Kennedy Space Center at Cape Canaveral. The county is comprised of 1310 square miles including eighty miles of coastline along the Atlantic Ocean. Brevard County is a mixed urban-rural county and its 1983 population was 308,571. The population in 1970 was 230,006 and the 1990 population is projected to be 374,700. This projection represents a twenty-one percent increase over the 1983 population. The population density for the county in 1983 was 310 persons per square mile.

The largest incorporated city in Brevard County is Melbourne with a 1983 population of 49,904. Titusville is the second largest incorporated area with a population of 35,372. Palm Bay is the third largest town in Brevard County with a population of 27,734, followed by Cocoa and Rockledge, with populations of 16,578 and 12,358 respectively.

In 1983, the total employment for Brevard County was 114,206. Services was the largest employment sector with 35,623 employees, representing 31 percent of the total employment for the county. Manufacturing was the second largest category with 24,829 employees, or approximately 22 percent of the total employment. Retail Trade accounted for 20 percent of the total employment in the county with 23,133 employees. Government employment accounted for 9 percent of the county employment, or about 10,426 jobs. All other sectors of employment contributed 5 percent or less to total employment in the county.

There are five active landfills in Brevard County, three of which are Class I landfills and two of which are Class III landfills. At the Central Disposal Landfill, the South Brevard Landfill, and the Central Disposal Facility Landfill, the highrise management method is used, and at the Schwartz Sanitary Landfill and the Cape Canaveral Landfill, the trench management method is used. The Central Disposal Landfill has an asphalt liner and the 320-acre Central Disposal Facility Landfill is constructed with a synthetic liner. Groundwater monitoring plans have been approved for the Central Disposal Facility Landfill and the Cape Canaveral Landfill.

The South Brevard Landfill was closed in 1977 and leveled because of the high water table and the proximity of the site to an airport. The site has since been reactivated and used for construction, demolition, and land clearing debris. The Central Disposal Landfill is also located on top of a previously operating landfill. At the original landfill, waste was placed below the water table which is 10 inches below the ground surface during the wet season. The current facility has a leachate collection system and a synthetic liner, and the waste is shredded before disposal. The Schwartz Road Sanitary Landfill is located at the Kennedy Space Center.
